Designation: Junior Cloud & DevOps Engineer (Google Cloud Platform / Django / React)

Salary: 18,000 INR to 21,000 INR per month (Total Package)

Location: 100% Remote (Requires high-speed internet, working camera, and microphone)

Employment Type: Full-time

Experience: 6 months to 1 year experience in Google Cloud Platform

Education: Bachelor's degree (B.E. / B.Tech / B.Sc / BCA) in Computer Science, Information Technology, Computer Engineering, Software Engineering, or a related technical discipline.

About HabotConnect FZCO

HabotConnect FZCO is a Dubai-based, bootstrapped, 100% remote company building a digital platform that connects parents with Learning Support Assistants (LSA) for children with learning difficulties. We operate in a high-ownership, accountability-driven remote culture where quality and clarity come before speed.

About the Role

As our Junior Cloud & Software Associate, you will support the stability, deployment, and security of our cloud platform and applications. This is an entry-level position where you will work directly with our deconstructed logic workflows and automated systems. You will be responsible for translating defined technical specifications into reliable, secure, and cost-efficient cloud resources, ensuring zero deviation from our operational "Golden Rules".

Primary Responsibilities

- **Infrastructure Management:** Provision, configure, and manage Google Cloud Platform (GCP) projects, App Engine, and compute resources using Terraform Infrastructure-as-Code (IaC)

- **Application Deployment:** Deploy code updates for React frontends and Django REST Framework (DRF) backend services using automated CI/CD pipelines
- **Deployment Quality Control:** Implement Poka-Yoke (mistake-proofing) automated linter checks and build gates within deployment pipelines to prevent and block non-compliant code
- **Database Administration:** Set up and manage Cloud SQL (PostgreSQL) databases with strict schema constraints and integrate Redis / Memystore for caching
- **Data Pipeline Alignment:** Align transactional database models and application logs with Cloud Pub/Sub and BigQuery streaming sinks
- **Data Protection & DR:** Implement backup and recovery solutions, maintain storage snapshots, and ensure high-availability redundancy across cloud layers
- **Identity & Access Control:** Configure Role-Based Access Control (RBAC) manage VPC firewalls and build secure JSON Web Token (JWT) and biometric authentication handshakes between services.
- **Mobile App Release Management:** Manage deployments, version control, and release configurations for mobile applications on the Apple App Store and Google Play Store.
- **Resource Optimization:** Monitor cloud usage, track billing parameters, and continuously optimize resources to minimize platform infrastructure costs.

Technical Skills / Tools

- **Cloud Platform:** Hands-on familiarity with Google Cloud Platform (GCP), Google App Engine (GAE), Cloud Storage, and BigQuery.
- **Infrastructure-as-Code:** Basic understanding of Terraform IaC for resource provisioning.
- **Languages & Frameworks:** Proficiency in Python (Django REST Framework) and React.
- **Databases & Caching:** Practical experience with relational databases (PostgreSQL/Cloud SQL) and Redis caching.
- **CI/CD & Linting:** Familiarity with automated build pipelines and Poka-Yoke deployment validation rules.
- **Mobile Deployment:** Basic understanding of distributing applications on Google Play Store and Apple App Store.
- **Cloud Security:** Basic knowledge of Identity & Access Management (IAM), VPC networking, and JWT authentication.

Soft Skills & Remote Work Mindset:

1. **Self-Discipline & Routine:** Exceptional time-management skills with the ability to maintain a highly productive and consistent remote routine
2. **Meticulous Attention to Detail:** Extreme structural discipline and a commitment to validating work thoroughly rather than assuming correctness
3. **Resourcefulness:** An independent learner who proactively utilizes documentation and outside resources to solve technical blocks
4. **Structured Communication:** Ability to communicate clearly, objectively, and concisely via chat and email

Onboarding & Success Path

Selected candidates must successfully complete a mandatory structured onboarding and training program. Engagement and progress during onboarding are closely monitored and form part of the probation evaluation. Failure to complete required training or demonstrate sufficient involvement may result in the offer being withdrawn.

What This Role Is NOT

- **This is NOT a senior architect, lead engineer, or tech lead position.** It is an entry-level, execution-focused role where you will deploy and maintain resources based on structured guidelines
- **This is NOT a subjective, open-ended decision-making role.** We build highly automated, strict, rule-based systems to eliminate guesswork
- **This is NOT a part-time or flexible freelance contract.** It is a full-time, high-ownership commitment

Application Process

Interested candidates are invited to apply for this exciting opportunity. As part of our evaluation process, you will be required to complete a short Hiring Project Form (HPF) simulating the analytical tasks of this role.

Kindly review the project instructions carefully and submit your completed work using the submission link below. Be sure to include your contact information and any other required details.

Submission Link (Google Form): <https://forms.gle/qaTCAXi3YA8MCN196>

Submission Deadline: 13-September-2026

Our team will review all submissions, and shortlisted candidates will be contacted for a virtual interview. Note: You only have one chance to submit. We are looking for quality of identification and clarity of impact.

Final Self-Screening Checklist Apply only if:

- You are comfortable with the exact salary bracket of 18,000 - 21,000 INR/month.
- You have a dedicated workspace with a stable internet connection and webcam for remote work.
- You are fully prepared to abandon traditional workflow writing and embrace strict Data Flow logic.
